

SCREENING SYSTEMS INTERNATIONAL, INC.

We, as manufacturers, use several products from Baton Rouge Industries. It is important to our company that the products we use in conjunction with our own be very reliable. Also, it is necessary that these products be in compliance with our customers standards.

Inside our machine shop, we use your L-632 Way Lube. It is used in our CNC equipment to keep our machines properly lubricated while operating. This product has worked very well in our applications.

We also use your L-612 Soluble Cutting Oil. This product has helped us cut down on tooling cost and tool wear. We use it in our CNC shop and manual machine shop. This product has really worked well and also has been cost effective, compared to what we were using.

Another product we use has been the L-642 Rust and Oxidation Inhibitor. This product is used to lubricate our carrier chain. We, as a manufacturer of this chain, have our chain throughout the power industry. This chain is put through very tough conditions and the L-642 has withstood these harsh conditions. This is very important to us as a company for warranty purposes.

We also use your L609 Hydraulic Oil. We find this as a very good all around oil. We use it in about 75% of our machines.

Another product is the M-23 Grease which we put in all of our chain to lubricate it. The grease has withstood all different types of conditions. We also use this grease for our roller bearing housings. This grease has been very beneficial to us for this application.

Aqua Lube is also a product we use throught our plant. We use it to lubricate our machines. Also we use it as a rust preventive.

As a whole, our company is very pleased with the range of products you supply us. Your service and delivery is very dependable and very important to us.

Thank you,

Hal Quebedeaux
